

Text on screen: If there are smart lampposts to facilitate positioning (Story 1) ...

Scene: The mother asks her son to join her for going shopping. At the meeting point, the mother finds that her son is not showing up. She then calls her son for his whereabouts.

Mother: Where are you?

Aren't we supposed to meet in the street near the Kwun Tong MTR station?

I still don't see you, why?

Son: I've been here for a long while but can't find you...

Mother: Is there any landmark near you?

Tell me and I'll come find you.

Son: Just the usual things...trees, restaurants and a smart lamppost...

Hey, how about I scan the QR code on the lamppost and send it to you? Then you'd know exactly where I am!

(Son scanning Geo-QR code)

Mother: Good!

Smart lampposts are installed with Geo-QR code, RFID tag and bluetooth beacon for positioning. The findings must be the most accurate. Send me the code now!

Son: Mum you're really getting smarter and know even more than I do.

I've sent it. Come join me.

Mother: Oh! I'm just one block from you. I'll arrive in one minute.

Don't move around!

(The mother walk away quickly after looking at her mobile phone)
