

Text on screen: If we can collect district level ambient gamma radiation data in future.....

Scene : The son is very much drawn to the data shown on the computer in front of him.
Mother asks curiously

Mother: Son, what are you looking at online so intensely?

Son: I'm checking the Hong Kong ambient gamma radiation level report from Hong Kong Observatory. They have 12 fixed radiation monitoring stations across Hong Kong measuring real time ambient gamma radiation level.

Mother: Why are you so interested?

Son: Our teacher asked us to do some study in this area recently, so I just check the related information.

Mom, this data is also disseminated in the Government open data website "data.gov.hk"!

Mother: Of course!

The key is to know where to find the information!

Son: Oh!

Not just the 12 fixed radiation monitoring stations from Hong Kong Observatory, Gamma Radiation Sensors are installed in smart lampposts. The data can be found in the "City Dashboard" and "data.gov.hk"!

Mother: Son, you are so smart!

Son: Look! This smart lamppost is near our house. Let me write an App to collect the data from it and build some analysis charts.

My homework will score high in this way!
